FU Event Management

User Requirements Specification

Purpose

FU Event Management is a university event-management system designed to support event discovery and management, user registration and access, event ticketing, attendance checking, sponsorship, feedback, and surveys.

The system provides different functions for seven actors: Guest, Registered User, Visitor, Event Operator, Checking Staff, Sponsor, and Administrator.

1. Actors

Actor	Responsibilities / Interactions
Guest	View events and news; register an account.
Registered User	Log in; log out.
Visitor	Browse events and news; view event and fundraising information; register for an event; manage tickets; submit feedback; answer surveys.
Event Operator	Manage event details and schedules.
Checking Staff	Check tickets for assigned events; record attendance for assigned events.
Sponsor	Manage sponsor profile and programs; view sponsorship associations where permitted.
Administrator	Manage accounts and roles. System configuration management remains subject to confirmation against the implementation.

2. Functional Requirements

2.1 Account and Access Management

FR-01: The system shall allow Guests to view events and news.

FR-02: The system shall provide an account-registration function for Guests.

FR-03: The system shall support login and logout for Registered Users.

FR-04: The system shall allow the Administrator to manage accounts and roles.

FR-05: The system shall enforce role-based access to relevant functions according to the application's authorization rules.

2.2 Event Discovery

FR-06: Visitors shall be able to browse events and news.

FR-07: Visitors shall be able to view event details.

FR-08: Event information may include lifecycle/state, images, sale windows, start and end times, price, schedule entries, and fundraising information.

2.3 Event Management

FR-09: Event Operators shall be able to maintain event details and schedules.

2.4 Registration, Tickets, and Attendance

FR-10: The system shall associate Visitors who register for events with ticket or registration records.

FR-11: Ticket records shall track status and relevant timestamps.

FR-12: Attendance records shall be associated with tickets and events and shall record attendance status.

FR-13: Checking Staff may be assigned to events for attendance checking.

2.5 Sponsorship

FR-14: Sponsor profiles shall be associated with accounts.

FR-15: Sponsors may be associated with events and contribution or profit-sharing information.

FR-16: Sponsor programs may be linked to one or more events.

2.6 Feedback and Surveys

FR-17: Events may have feedback forms containing questions.
FR-18: Visitor feedback answers shall be associated with a Visitor and a feedback question.
FR-19: Events may have surveys containing questions and answer options or responses.

3. General Quality Requirements

NFR-01: The application shall validate user input and enforce authorization on protected operations.
NFR-02: The database shall enforce referential integrity where foreign keys are defined.
NFR-03: Configuration secrets must be kept outside committed source files.
NFR-04: Database setup shall be repeatable using a documented SQL script.

4. Use Case Diagram Scope

The Use Case Diagram (UCD) for FU Event Management shall contain the seven actors and their associated use cases listed below.

Actor	Use Cases
Guest	View events and news; register an account.
Registered User	Log in; log out.
Visitor	Browse events and news; view event and fundraising information; register for an event; manage tickets; submit feedback; answer surveys.
Event Operator	Manage event details; manage event schedules.
Checking Staff	Check tickets for assigned events; record attendance for assigned events.
Sponsor	Manage sponsor profile and programs; view sponsorship associations where permitted.
Administrator	Manage accounts and roles; manage system configuration (subject to confirmation against the implementation).

System boundary. Label the system boundary “FU Event Management System”. Place all use cases inside the boundary and all seven actors outside it, connected to their corresponding use cases.

Relationships. Association lines shall represent interactions between actors and use cases. Add <<include>> and <<extend>> relationships only when supported by the intended workflow and confirmed requirements.

5. Scope Notes and Assumptions

- The seven actors and their use cases listed in Section 4 reflect the UCD requirements provided for the project.
- Guest account registration and Visitor event registration are treated as separate use cases.
- Login and logout remain separate use cases for Registered Users.
- This document describes intended system behavior. Details not confirmed by the available requirements or source code should be verified before implementation.
- Payment processing, donation transactions, email notifications, and other unconfirmed workflows are outside the explicitly defined UCD scope unless additional project requirements specify otherwise.

Items to Confirm

- Confirm how the Visitor actor relates to the Registered User actor, since the requirements assign event registration and ticket-related activities to Visitors but login/logout to Registered Users.
- Confirm whether system-configuration management is in scope for the Administrator and supported by the implementation.
- Confirm required ticket statuses and timestamps, event lifecycle and sale-window rules, sponsor contribution or profit-share details, and permissions for viewing sponsorship associations.
