FPT UNIVERSITY

# CAPSTONE PROJECT REGISTER

Class: Duration time: from 01/01/2025 To 30/04/2025

(*) Profession: <Software Engineer> Specialty: <ES> ☐ <IS> ☒

(*) Kinds of person make registers: Lecturer ☒ Students ☐

1. Register information for supervisor (if have)

| | Full name | Phone | E-Mail | Title |
|---|---|---|---|---|
| Supervisor 1 | Trần Ngọc Như Quỳnh | 0779989791 | Quynhtnn4@fpt.edu.vn | Ms. |
| Supervisor 2 | | | | |

2. Register information for students (if have)

| Student | Full name | Student code | Phone | E-mail | Role in Group |
|---|---|---|---|---|---|
| 1 | | | | | Leader |
| 2 | | | | | Member |
| 3 | | | | | Member |
| 4 | | | | | Member |
| 5 | | | | | Member |

3. Register content of Capstone Project

(*) 3.1. Capstone Project name:

- English: Woodwork Design, Crafting & Repair Booking Platform
- Vietnamese: Nền tảng đặt dịch vụ thiết kế, chế tác & sửa chữa đồ gỗ
- Abbreviation: WDC&RBP

a. **Context**:

Today, there is a rising demand for unique, high-quality wood products. From home and office furniture to decor, handcrafted woodwork is becoming more popular for its beauty, durability, and long-lasting value. However, finding and booking services for wood design, crafting, or repair can be challenging for users in several ways:

- Limited reliable service options: It’s not easy for users to find skilled and reputable woodworkers, which can lead to quality issues with custom designs or repairs.
- Few customization options: Many users want personalized wood products (such as specific sizes, styles, or materials), but traditional woodworking services often lack flexibility to meet these requests.
- Difficulty in assessing quality: For valuable woodwork, users need confidence in the woodworker’s skills and experience. However, limited information and reviews make it hard to trust the service quality.
- Unclear pricing: Woodworking and repair services often lack transparent pricing, making users worried about hidden or unexpected fees after the job is done.

To address these needs, the Woodwork Design, Crafting & Repair Booking Platform has been proposed as a complete solution to help users find, review, and book woodwork services easily.

b. **Proposed solutions**

To address users' challenges in finding quality woodwork services, the platform will implement the following solutions:

- **Comprehensive Service Directory:** Provide a directory of vetted woodworkers with profiles showing skills, past projects, and customer reviews, making it easy for users to find trusted professionals.
- **Flexible Customization Options:** Allow users to specify custom requirements (e.g., size, material, design) when booking, enabling personalization and matching users with providers who can fulfill unique requests.
- **Transparent Pricing:** Display clear, upfront pricing for services and allow users to request quotes before booking, building trust and reducing concerns over hidden costs.
- **Quality Assurance and Ratings:** Offer a feedback and rating system to help users evaluate service quality based on prior customer experiences, promoting high standards and informed choices.
- **In-App Consultation:** Enable users to consult with woodworkers before booking, ensuring clear communication of expectations and project details.

These solutions will make the platform a reliable choice for quality woodwork services, offering users convenience, transparency, and flexibility.

c. **Functional requirements**

***Web App & Mobile App***

- **Guests**
  - Browse all Services and Woodworker/Service Providers on the platform
  - View each woodworker's profile for assessing reliability and expertise.
  - View customer reviews and ratings of Woodworkers' services.
  - Search for Service
  - Search for Woodworker/Service Provider
- **Customer-User:**

  Has the functions of Guests and the following functions:
  - Sign up to become a member by phone number/email with OTP
  - Manage personal profile
  - Select and use services
  - Specify details (e.g., size, material, style) for products or services during booking.
  - Customization options to meet unique user needs before confirming a service.
  - Options for users to contact or chat directly with woodworkers before booking to discuss details and specific requests.
  - Store chat history for reference during the service process.
  - Display clear service pricing and support users in requesting detailed quotes for services before booking.
  - Payment
  - Track service processing progress
  - Rate and leave feedback after the service is completed.
  - Manage service booking
- **Woodworker-User:**
  - Manage profile
  - Create and update their profiles with information on skills, past projects, areas of expertise, and available services.
  - Upload photos of past work to showcase their abilities and attract clients.
  - Allow woodworkers to respond to customer quote requests by providing custom or standard quotes for specific services.
  - Adjust prices based on service complexity or customization requests.
  - Appointment and Service Management
  - Consultation and Communication with Customers

- View customer ratings and feedback to understand client satisfaction and areas for improvement.
- Respond to reviews, providing additional insights or clarifications if necessary.

***Admin Web System***

- **Support Staff:**
  - Customer Support and Complaint Handling
  - Service Feedback Support: Manages customer reviews and assists woodworkers with feedback and platform-related requests.
- **Quality Assurance Manager**
  - Review and Feedback Moderation
  - Monitors customer feedback to ensure high-quality services
  - Generates reports on woodworker performance, customer satisfaction, and service quality metrics.
- **Administrator**
  - User Account and Permissions Management
  - Configures payment options, notifications, and technical settings.
- **System Handler**
  - Automatically send statistics to administrators via email.
  - Push notification to User.

d. **Non-Functional requirements**

- **Security**
  - The system must be secured and protect the privacy information of users.
- **Usability**
  - Easy for everyone to use.
  - Application UI must be simple, friendly.
  - Main language used in the application is Vietnamese.
- **Reliability**
  - The platform should have high availability, ensuring that it is accessible to users most of the time.

(*) 3.2. Main proposal content (including result and product)

a. **Theory and practice (document):**

- Students should apply the software development process and UML 2.0 in the modelling system.

- The documents include User Requirement, Software Requirement Specification, Architecture Design, Detail Design, System Implementation, and Testing Document, Installation Guide, sources code, and deployable software packages.
- Server-side technologies:
    - Server: NodeJS/.NET
    - Database System: MySQL/SQL Server.
- Client-side technologies:
    - Web Client: HTML5, CSS3, JavaScript, ReactJS/Angular.
    - Mobile Client: Flutter/React Native

b. **Program:**

- Web App for Guest, Member, Moderator and Administrator
- RESTful API for System
- Client-Server Model

c. **Proposed tasks for students:**

- Task package 1: Design ERD and Database
- Task package 2: Develop the API for the System.
- Task package 3: Develop the Web application
- Task package 4: Develop the Mobile application
- Task package 5: Build - Deploy and Test the system.
- Task package 6: Prepare all the required documents: System analysis and design, test plan, installation manual, user manual.
- Each work group may have many students participating but there will be 1 member responsible for the main responsibility.

*Notice: all students are required to understand the reference documents thoroughly and may need to explain to the viva committee.*

4. Other comment (propose all relative thing if have)
